Job reference – Miha Vintar

Miha Vintar has been working for iSYSTEM Labs as a student in the summer of 2023. As I was his mentor, we have worked together on several projects, which mostly included programming in Python, C++ as well as C programming languages.

Miha has always demonstrated very good overall knowledge and understanding of the application that he was working on, has contributed improvement ideas and showed good communication skills. He was a pleasure to work with.

Based on my experience with Miha, I can highly recommend him for any possible programming / development position.

You can contact me for any additional information you may need.
