

Letter of recommendation – Miha Vintar

To Whom It May Concern,

It is my pleasure to recommend Miha Vintar, who worked at Telosmation as a Backend Engineer from September 2025 to October 2026. Miha was our very first employee, joining on day one, and played a central role in building the company's technical foundation from the ground up.

From the start, Miha took ownership of far more than a typical backend role. He designed the system architecture for most of our projects, making key decisions on structure, scalability, and technology choices that the rest of the team continues to build on. His ability to turn loosely defined business needs into clean, maintainable, well-reasoned designs was invaluable during our early growth.

Miha also led much of our work integrating AI capabilities into our products, including building AI agents and connecting them with our backend systems and third-party services. This was new and fast-moving territory, and he consistently researched emerging tools, evaluated them critically, and delivered reliable production integrations.

As our first hire, Miha showed a level of initiative, adaptability, and reliability that is rare. In a startup environment with shifting priorities and limited resources, he routinely stepped up and cared deeply about the quality of what we shipped.

I recommend Miha without reservation. Any team would benefit from his technical depth, architectural judgment, and ownership mindset. Please feel free to contact me at ben.schwietert@telosmation.com if you would like any further information.

Sincerely,

Ben Schwietert

Co-Founder at Telosmation and Solvenia
